## PROFIL

DevOps engineer and web developer with **nearly 30 years of experience** in IT.

Ma **double expertise Développement + Ops** enables me to design, test and deploy end-to-end software solutions : développement d'API et d'web interfaces fonctionnelles (**PHP/Symfony** primarily, **API Platform**), conception et exploitation de **pipelines de delivery pipelines** automated across leading platforms (**GitLab CI, BitBucket Pipelines, GitHub Actions**), mise en place d'**outils de métrologie et de technical observability tools** (**Prometheus, Grafana, Blackbox Exporter**).

**Deep expertise in production databases** — major market DBMS (**Oracle, PostgreSQL, MySQL, SQL Server**) and data manipulation (**ETL Talend, PL/SQL, SQL**).

My background as a senior developer and **Certified Scrum Master CSP-SM** me donne une native understanding of development team needs regarding continuous integration and deployment. This is the **dual Dev + Ops vision** I bring today.

I also have **3 years of digital management experience** and I am an instructor teaching courses on **Docker, PCA/PRA, Web Attacks** at IT schools.

**My distinction since early 2025** : I have integrated **IA** across my entire production chain (**Claude Code**, smart automation workflows), enabling me to significantly multiply my own productivity.

**Availability: Immediately with 1 month notice**

**Daily rate: From €650**

## EXPÉRIENCE PROFESSIONNELLE
